

RadTherm has been in use for nearly a decade at major automotive companies. RadTherm is the core thermal solver for many of our customers and used in a wide variety of applications, including:

- Underbody & Exhaust Thermal Management
- Underhood Thermal Management
- Climate Control Systems
- Vehicle Interior/Thermal Comfort
- Many other areas, including electronics and lights

ThermoAnalytics has established strong long-term relationships with many of our major automotive customers. ThermoAnalytics has also worked with major Tier 1 and Tier 2 vendors to help solve thermal issues with our tools and analytical services. ThermoAnalytics has developed specialized thermal models for insulation and shield manufacturers. We have also done independent performance testing and product comparisons.
